## Pre-Calculus 12 Ch. 6 - Trigonometry (Part 1)

| By the end of the unit, it is expected that you will: | $\stackrel{\ominus}{\text { ExCELLENT }}$ |  | $\stackrel{:}{\text { WHAT?? }}$ |
| :---: | :---: | :---: | :---: |
| Demonstrate an understanding of angles in standard position, expressed in degrees and radians. <br> EXAMPLES <br> Graph the following angle in degrees and radians in standard position: $\frac{4 \pi}{3}$ |  |  |  |
| Understand how the unit circle is used to determine the value of trigonometric functions. |  |  |  |
| Solve problems, using the six trigonometric ratios for angles expressed in radians and degrees. <br> EXAMPLES <br> The point $(-3,4)$ is on the unit circle. Determine the values of the six trig ratios. |  |  |  |
| Graph and analyze the trigonometric functions sine, cosine and tangent to solve problems. <br> EXAMPLES <br> Graph the following and solve $\sin 2 x=-\frac{1}{2}$ for $0 \leq x<2 \pi$ |  |  |  |
| Solve, algebraically and graphically, first and second degree trigonometric equations with the domain expressed in degrees and radians. <br> EXAMPLES <br> Graph the following and solve $2 \sin ^{2} x-\sin x-1=0$ for $0 \leq x<2 \pi$ |  |  |  |
